

**Rand McNally**'s new IntelliRoute® Dock2Dock solution is the first in the commercial transportation industry to provide truck-attributed dock-to-dock navigation on city and inter-neighborhood streets. The solution equips carriers and shippers with GPS-accurate, truck-specific routing that allows Class 8 and longer combination vehicles (LCVs) to route from the origin's dock to the destination's dock. The precise routing technology is expected to minimize "out-of-route" miles and maximize fuel efficiency, leading to increased productivity and profit.

"IntelliRoute® Dock2Dock navigation fills a critical need for carriers to route and deliver efficiently from the first to the last mile," said Donna Koppensteiner, vice president of the enterprise division for Rand McNally. "With soaring fuel prices, every mile counts. IntelliRoute® Dock2Dock cuts time and cost by helping prevent delays, hefty fines or accidents that can occur when drivers aren't aware of truck routing restrictions to and from highways. Our customers also anticipate increased on-time deliveries and potential additional deliveries because drivers will spend less time navigating and backtracking on local streets."

Rand McNally's team of GIS professionals developed IntelliRoute® Dock2Dock by enhancing its proprietary transportation data with NAVTEQ Transport™ data to create the most reliable, comprehensive and complete address-to-address mapping. The IntelliRoute® Dock2Dock routing solution will include more than 6.5 million miles of U.S. truck-attributed roads, with more than 23 million links that contain unique truck attributes.

"With IntelliRoute® Dock2Dock, customers will enjoy a level of routing accuracy and quality that they can't

find anywhere else," said Roy Kolstad, vice president and general manager of Enterprise Americas, NAVTEQ. "NAVTEQ supplies IntelliRoute® Dock2Dock with more than 6 million miles of roadway in the U.S. The complete identification of truck attributes for height and weight restrictions also serve to route more complex truck combinations."

The new product was to be available as an online download for existing IntelliRoute® customers beginning in October 2008. The IntelliRoute® Dock2Dock solution easily integrates with other logistics packages using an application program interface (API). Companies interested in the product should call Rand McNally's Commercial Transportation division at (800) 234-4069.
