
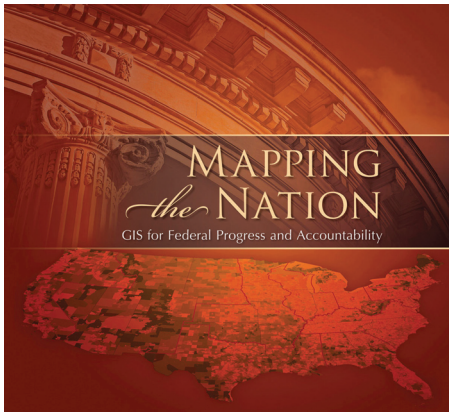

Mapping the Nation: GIS for Federal Progress and Accountability

This latest book from Esri Press presents a dynamic collection of maps that graphically illustrate some of the many ways GIS technology is being used throughout the federal government.

The book is divided into seven strategic areas of government that use maps created with GIS technology: land and natural resources; health and human services; science and exploration; law enforcement, public safety, and homeland security; global affairs; tribal interests; and defense. *Mapping the Nation* also highlights how GIS is being used to embrace new initiatives, such as the

Gov 2.0 movement, which uses information technology to: Improve government services, Increase transparency and accountability, and Promote citizen engagement. The U.S. government was an early adopter of Esri's GIS technology, first implementing it more than 30 years ago. GIS has since become an essential part of the federal decision-making process. [*Mapping the Nation: GIS for Federal Progress and Accountability* (ISBN-13: 978-1-58948-286-9, 140 pages, \$19.95) is available at online retailers worldwide, at esri.com/esripress, or by calling 1-800-447-9778.
